

URL Monitoring using Icinga

EC2

	Metrics	Remarks
1	CPU Utilization	
2	Memory Utilization	
3	Disk Usage	
4	Status Check	
5	Load Average	

ASG

	Metrics	Remarks
1	CPU Utilization of each instance	Using trail event
2	Memory Utilization of each instance	Using trail event
3	Scaling notification	

TG

	Metrics	Remarks
1	Response time	
2	Requests	
3	Unhealthy instance count	
4	5xx errors	

RDS

	Metrics	Remarks
1	CPU Utilization	Separate Monitoring of writer instances should be there.
2	Freeable Memory	

3	DB Connections	
4	Connection attempt	Aurora MySQL only
5	Deadlock	
6	Queries	
7	FreeLocalStorage	
8	Failover Notification	
9	Master password reset notifications	
10	SG Modification alert	
11	Reboot notification	
12	Scaling Notification	

ECS

	Metrics	Remarks
1	CPU Utilization	
2	Memory Utilization	
3	Scaling notification	
4	ECS task unhealthy notification	Possible only with container insights enabled

Lambda

	Metrics	Remarks
1	Errors	
2	Duration	
3	Set alert for errors in log group using metric filter	

API Gateway

	Metrics	Remarks
1	5xx Error	

2	4xx Error	
3	Latency	

NAT

	Metrics	Remarks
1	PacketsDropCount	

S3

	Metrics	Remarks
1	BucketSize	
2	Delete event notification for db backup buckets	

Billing

	Metrics	Remarks
1	Budgets	
2	Cost Anomaly Detection	
3	Bandwidth/Data transfer cost monitoring	

AWS Health Dashboard

Set Notifications for all events in the AWS Health Dashboard
